LOCAL COMMUNICATIONS PANELS

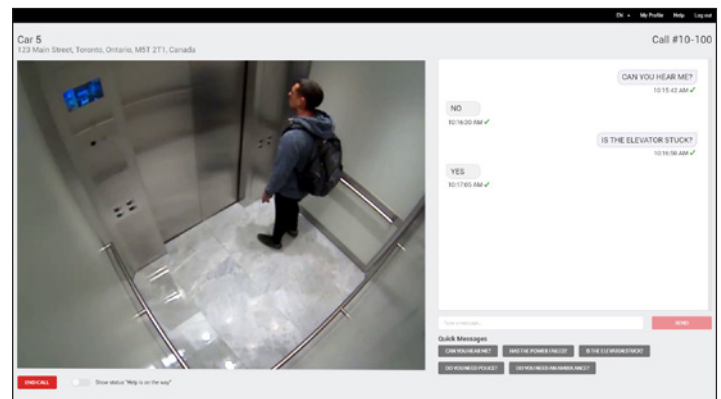

Elevators with over 60ft travel require a communication panel for on-site emergency personnel to communicate with each elevator. The Video & Messaging System (VMS) communication panel allows you to see inside all elevators in your building at glance, and quickly determine the extent of an emergency and communicate with those inside. You have the option to view large video feeds of a single cab or multiple feeds at the same time with access available from multiple on-site points, such as from inside a CACF room, lobby, or 24/7 monitoring location.

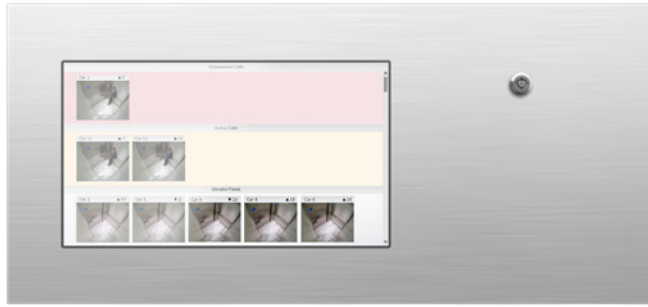

Available in 2 configurations – Choose from a 15-inch touchscreen panel or a 24-inch desktop monitor with the ability to send and receive text messages, audio and 1-way video communication from passengers, enabling flexibility for your on-site monitoring configuration

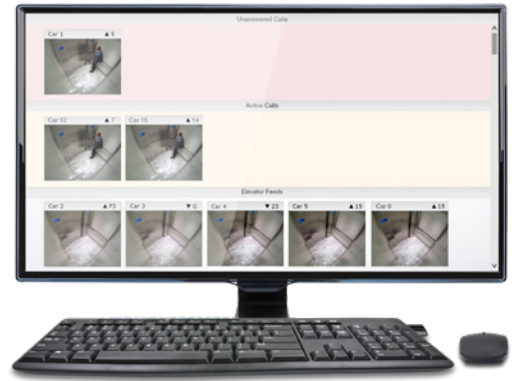

Elevator Feeds, Active & Unanswered Calls

Current Call

15" Touchscreen

24" Computer Monitor
