

# DESTINATION DISPATCH

Destination Dispatch is an ADA-compliant system that allows users to call an elevator and select their destination. The desired floor is chosen from a lobby panel, and an elevator takes passengers directly to their destination. If multiple people choose floors close to each other, the assigned elevator delivers passengers only to the pre-selected cluster of floors. Accessibility is key to this system, with either vocal prompts, a light-up indicator, or both directing you to the correct elevator. The unit comes standard in 7 or 10-inch options that are card-reader enabled and customized upon request.

## Door-In-Door Solution

The Door-in-Door solution allows a single set of push buttons to be used for both fire and regular service. The inner door acts as the service cabinet providing access to both the button and service keyswitches, while the outer door provides additional access to the fire service controls.

## Touchscreen Destination Solution

Upgrade the Destination Dispatch COP with a Touch-To-Go touchscreen. While in DD mode, the TTG screen can act as a next-destination indicator, a digital signage board, or used for 2-way video communication. In independent or fire service mode, the graphics will automatically change, allowing the passenger to select destination floors and eliminating need for 'hidden' mechanical pushbuttons.

## Destination Lanterns

MAD offers a variety of Destination Lanterns to meet your project requirements. Choose between our Value Series, Standard series, or Concept (custom) design. From a plate design to an illuminated flag, we can match the design of your building. Puck replacement and Ray Blade lanterns are also available.

## Kiosk Solution Mounting Options

The Destination Dispatch Kiosks provide a touchscreen solution with an enhanced user interface for your elevator passengers. Bring a versatile high-end look to your building and provide your passengers with a fixture that not only gets the job done but feels good when using it. In addition, this leading technology is non-proprietary, so it's seamlessly integrated into your building.
